

Conversion Instructions

8800 MasterFlush Control Panel to 8100 MasterFlush Control Panel

- * At rear of toilet, cut off deutch connector to expose green, white and black wire.
- * Remove existing module.
- * Run negative ground wire from old module to black wire at back of toilet.
- * It may be easier to add 3' to 4' of black negative ground wire and connect it to the green and white wire from the macerator motor and solenoid water valve.
- * Replace existing 8800 touchpad switch with new 8100 switch.
- * Bring positive wire (normally red) to the red wire on the back of the new switch.
- * Install a fuse holder at this point- 25-amp at 12-volt.
- * Connect the orange wire from the switch to the green wire at the toilet, which is connected to the macerator motor red wire.
- * Connect the green wire on the switch to the white wire on the water valve.
- * Wiring should be 12-gauge or larger.
